

Is your anti graffiti policy ecologically sound ?

Scalp has been manufacturing surface cleaning and facade treatment since 1950. The last 10 years development has been into water based anti graffiti treatment, water based sealers and cleanups. These products can be applied for protection on anything from concrete to buses and can be cleaned with pressure wash hot water or graffiti cleaner.

Why water based ?

Removing solvent from the public domain is an ecological requirement for the safety of future generations and replacing carbon emissions which are part caused by solvent manufacturing and emissions. We have introduced water based sealers, cleaners and anti graffiti products to go on any surface, be it concrete, brick, stone, painted surfaces or even external heat insulation.

Brick & Stone cleaner

Having now successfully launched water based stone and brick cleaners, you may ask why bother? Do you know how dangerous Hydrofluoric Acid is?, well lets put it this way, if you want to clean bricks or stone, that is what is used. It is cheap and corrosive and should be collected after use as it is not allowed to be released into the drains and will attack painted window frames and even glass.

Scalp alternative is a water based brick cleaner which is biodegreable and can be released into the drains and you don't have to mask out windows or painted surfaces and contributes to brick porosity. We also have a product which hardens and reinforces the surface of limestone or siliceous stones to lengthen the life of, as an example, gargoyles on cathedrals !

Sample Solutions

<p>Scalp 16 Specifications clear Waterborne varnish designed to protect surfaces eg: painted products, PVC cabinet, road panels & street furniture, which can then easily be cleaned by graffiti clean.</p>	<p>Permanent protection, removes graffiti with scalp 49.</p>
<p>Scalp Primer 36 Water based</p>	<p>Over stone marble or concrete we recommend a clear undercoat.</p>
<p>Scalp Protec 67 Water based</p> <p>Water based vegetable wax, biodegradable and totally solvent free will withstand temperatures to 75 degrees finish clear and transparent, microporous.</p>	<p>Sacrificial protection clean with hot water pressure and replace area with protect 67.</p>
<p>Scalp Anti Stain 07 Protects porous surfaces from staining</p> <p>Waterborne resin non film forming to protect from water... and oil penetration of rough cast cement and concrete, stone and cobbles etc.</p>	<p>Clean surface with soapy water</p>
